## System Glazing facade system with mini glazing beads

System Glazing facade system SFB 5050, with mini glazing beads, is a newly developed facade system based on sections and functions of the glazed roof system SFB 5050. The system has a two-stage pressure equalising seal. The outer seal is water-repellent, the ventilation and draining channels ensure pressure equalising function and the inner seal is air-, water-, and vapour-tight. The inner seal takes up the pressure difference between the outside and the inside. The sections are 50 mm wide with 32 mm wide mini glazing beads which should be preferably fixed with countersunk screws. The glass rebate provides space

for double glazing units. The glazing units have standard sealing. Horizontal, vertical and dividing sections are available in various depths. Vertical dividing sections have the same width as the framework sections, i.e. 50 mm. SFB 5050 can be easily completed with doors and opening windows. Doors and windows are installed together with the frame in the glass rebate instead of glazing units.

The facade system sections can be anodised or powder coated with various colours and type of surface finish on the inside or the outside.

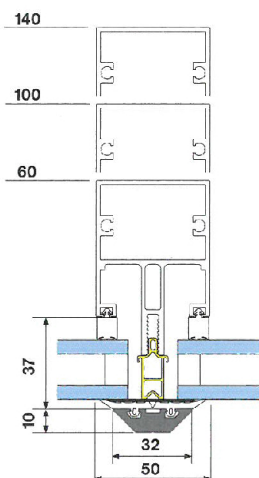

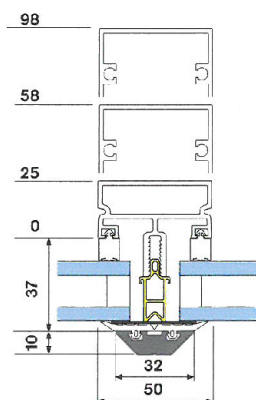

# Range of sections

## SFB 5050 SG

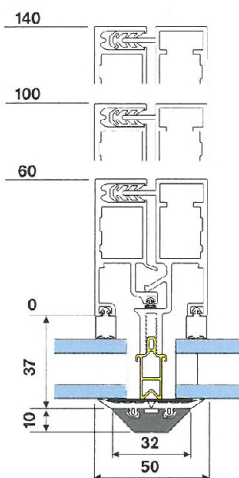

### Range of sections in facade system SFB 5050

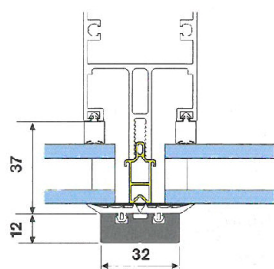

Framework section 50 mm, vertical, for double glazing unit

Framework section 50 mm, horizontal, for double glazing unit

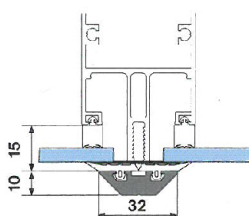

Dividing section 50 mm, vertical, for double glazing unit

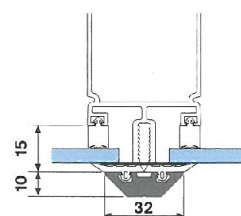

Framework section 50 mm, vertical, for double glazing unit, glazing beads 32 x 12 mm

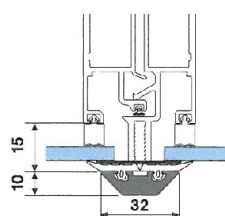

### Rebate for single glass

Framework section, vertical, single glass

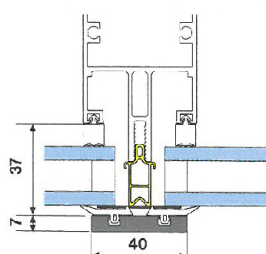

Framework section, horizontal, single glass

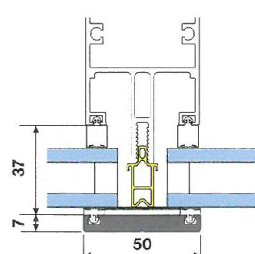

Dividing section, vertical, single glass

### Possible alternative pressure plate

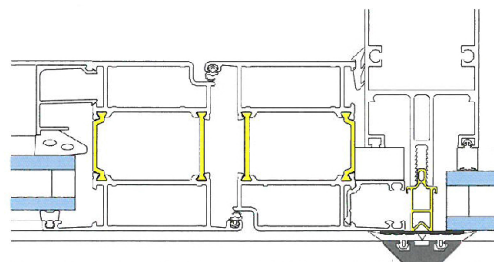

Glazing bead 40 x 7 mm

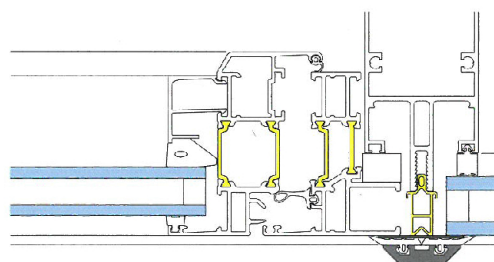

Glazing bead 50 x 7 mm

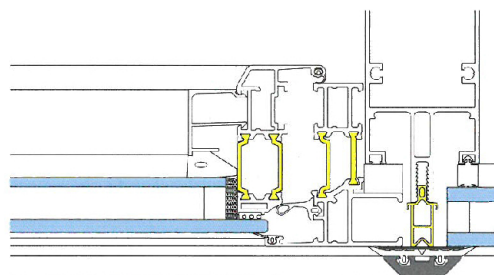

### Windows/doors in facade system SFB 5050

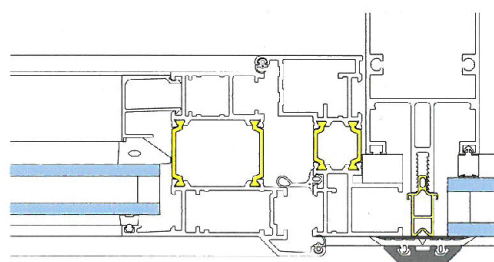

Door SFB 2074 in facade

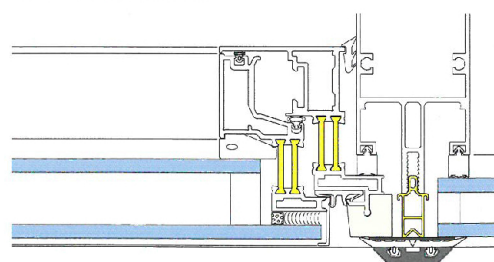

Window SFB 1074 in facade

Block window SFB 1074 in facade

Outward opening window SFB 1074 in facade

Outward opening facade window SFB 4074 in facade
